Service in Formwork + Shoring

# PASCHAL Maturix

## Intelligent concrete monitoring in real time with Maturix

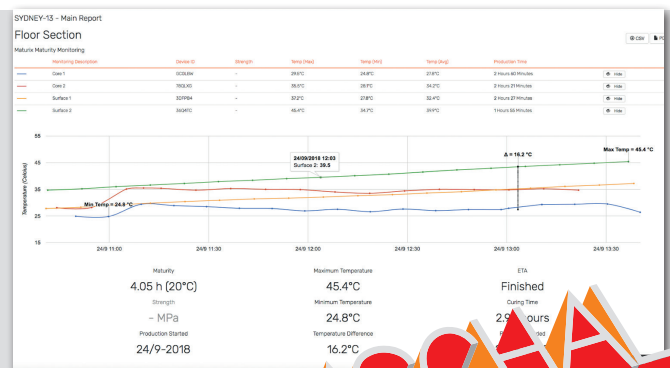

An analysis of the concrete strength is carried out by means of intelligent, wireless radio transmitters – this allows both improved planning and real-time monitoring independent of location and time.

- Save time, reduce costs
- Earlier dismantling by determining the optimal point of time
- Control and adjust the concrete temperature from any location
- Increased production output
- Real-time insight into the concrete maturity status

### Simple evaluation of measurement data

The Maturix software is a user-friendly web-based application that can be accessed from anywhere. Thanks to the analyses and the recorded digital documentation of measurement results, the administrative effort is significantly reduced. The well-founded data also provide the basis for decisions and serve to verify quality.
